Ai Text Intro

Hello and thank you for purchasing Ai Text Intro. In this tutorial, we'll cover the basics on how to navigate this template. <u>This User Guide is meant to be an explanation in addition to the Video Tutorial</u>.

Text

When you open the project, you should be on "**Final Comp 2k**" or "**Final Comp 4k**". In these comps you'll find all 9 scenes. Once you open, say **S01**, you'll see in its timeline all of the text placeholders that consist in that specific scene.

You can also go to the project panel >> **01. Edit Comps** >> and open a Scene folder (eg: **S01**, **S02**, **S03**, etc..). In those folders you'll also find their text placeholders (S01 contains S01 Text Placeholders, S02 contains Scene 02 Text Placeholders, etc..).

Open a text placeholder and double click on the text layers to edit the text. You may need to scrub through the timeline to see the full text. Do this for all text placeholders in the scene.

Do NOT delete Text Layers in Text Placeholders

Logo

Logo Placeholder is located in **S09**. Either go to S09 edit folder or open S09 in the Final Comp. Once you locate **S09 Logo Placeholder** you can import your logo into the Project Panel, then drag and drop into the timeline. You can remove the Reference Logo or hide it as shown in the video.

Controls

Once you've changed your text, go back to your scene (S01 for example) and select Control Layer. Each control layer have these fundamental controls:

Text Size　　　 - Changes the scale of the text
Text Position - Changes the x and y position of the text
Text Color　　 - Changes the basic color of the text (not the rgb)

Background Color 01/02 - Changes the gradient colors of the background.

Some scenes have extra controls. These are completely optional and are really for those that want a bit more control over the color/position of certain text:

Text 01 RGB Color Shift - Changes the RGB color of the first text. It then shifts to white (or whatever color you set in Text 01 Color

Text 02 RGB Color Shift - Does the same as Text 01 except only for a specific word

Text 02 RGB Word Picker - Allows you to choose the RGB word

Word Transition Positions - This is just in case you want to move the position of the transition word to create a better flow from the previous word. If the Control Layer has these controls, you can move your timeline indicator to the green markers (Word Transition Positions 01/02). I show this in the video tutorial as well.

Text Color Tail Shift - Controls the hue cycle of the rgb colors that animate at the end of specific texts.
